International Petroleum Corp.

Operations and Financial Update
Second Quarter 2018

Mike Nicholson, CEO
Christophe Nerguararian, CFO
August 7, 2018
International Petroleum Corp.

Corporate Strategy

- Deliver operational excellence
- Maintain financial resilience
- Maximize the value of our resource base
- Grow through M&A
## International Petroleum Corp.

### Q2 2018 Highlights

<table>
<thead>
<tr>
<th>Production Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Q2 production at <strong>34,900</strong> boe/d, 6% higher than Q1 production and at the upper end of CMD guidance</td>
</tr>
<tr>
<td>- 30,000 to 34,000 boe/d full year guidance revised to <strong>32,500 to 34,000</strong> boe/d</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

\(^{(1)}\) Non-IFRS measure, see MD&A  
\(^{(2)}\) See MD&A and AIF, as at December 31, 2017, after giving effect to the Suffield acquisition (see also Press Release of February 26, 2018)
International Petroleum Corp.
Production - Q2 2018

- Q2 production 6% ahead of Q1 and at upper end of CMD guidance
- Bertam infill well performance ahead of guidance
- Canada gas production optimisation showing positive results
International Petroleum Corp.

Production Growth

- Full year guidance range revised to 32,500 - 34,000 boepd

Revised CMD guidance
International Petroleum Corp.

Operating Costs\(^{(1)}\)

- On track with CMD guidance

\(1\) Non-IFRS measure, see MD&A
International Petroleum Corp.

2018 Guidance - Capital Expenditure (net)

- 2018 Capital Expenditure Forecast: 44.0 MUSD (Q1 39.4 MUSD)
- Additional capital approved in Q2 mainly for gas optimisation in Canada
- Keruing-1 exploration well in Malaysia approved during Q1

Canada – 14.6 MUSD
- Oil drilling and preparation
- Maintenance capital
- Gas optimisation

France – 6.6 MUSD
- Paris Basin
  - Vert-La-Gravelle
  - Well reactivations
  - Maintenance capital

Netherlands – 1.4 MUSD
- Development well (E17)
- Maintenance capital

Malaysia – 21.4 MUSD
- Infill wells (carryover from 2017)
  - Keruing-1 well
Organic Growth

- *Shallow gas well optimisation budget increase approved*
  - High graded opportunity set to focus on low cost, high return activities
  - 7,000 swabbing operations forecasted in 2018 vs 5,500 original budget
  - Programme of refrac / recompletions identified – approved for 2018 programme
  - Further optimisation work approved – siphon strings, coil tubing activities, reactivations

- *Oil development drilling*
  - Four area studies completed – Gibson / Dieppe / Easy Coulee / N2N
  - Subsurface work is well progressed in support of 2019 drilling programme
  - Environmental surveys mostly complete and regulatory applications submitted

- *Enhanced oil recovery*
  - YYY pool is responding well to chemical injection
  - N2N enhanced oil recovery maturation ongoing

- *Oil upside: new play concepts*
  - Full opportunity review of Suffield assets ongoing
IPC – Canada
Canada Gas Optimisation

- **Significant inventory of low risk, low cost opportunities**
  - Swabbing  -> increase in 2018 activity
  - Optimisation  -> siphon string pulls
  -> coil tubing clean outs
  -> mud plug removal
  - Refrac/Recomplete  -> workover of existing wells,
  -> perforation/frac of bypass pay zones
  -> planning for campaign in Q3/4 2018

**Additional 4.4 MUSD sanctioned**
- OPEX of 0.6 MUSD
- CAPEX of 3.8 MUSD
  
  \[
  \text{Campaign breakeven} < 1.1 \text{ CAD/Mcf}
  \]

⇒ **Adds 2.7 MMscf/d to 2018 production**

---

Swabbing

Coil Tubing Rig
IPC - Malaysia - Bertam
Reservoir Performance

- **Production**
  - A15 area continues to perform in line with expectations
  - A16 / A17 performance ahead of CMD guidance

- **Growth**
  - Keruing exploration well approved in Q1
  - Up to 3 infill targets identified (A9 south, A15 neck, A14)

![Bertam - Distribution of Oil Production (Gross)](chart.png)
IPC - Malaysia - Keruing

Organic Growth

- **Opportunity Overview**
  - High quality tertiary sands in shallower I35 sands
  - Stratigraphic trap potential similar to Angsi South field
  - Structural closure case similar to infill targets
  - Charge is the main risk

- **Plan to drill late 2018, subject to regulatory approval and rig contract**

- **Gross unrisked prospective resources 2.7–7.2–15.7 MMboe (Low–Mid–High)**

- **Simple high value tie back in success case**

---

(1) See MD&A and AIF, as at December 31, 2017
IPC - France
Organic Growth

- Development project maturation remains a focus
  - Vert-La-Gravelle
    - Horizontal drilling
  - Villeperdue West
    - 3D seismic, acquired, processed and interpretation ongoing
    - Evaluating prospectivity of deeper Rhaetic prospect
International Petroleum Corp.

Realised Prices

- **Brent, WTI, WCS and realised oil prices**
- **AECO, Empress and realised gas prices**
  - Realised price year to date in line with CMD guidance of 2.40 CAD/Mcf
International Petroleum Corp.

Operating Cash Flow\(^{(1)}\)

- First half operating cash flow => 66% of full year guidance\(^{(2)}\)
- Net Debt\(^{(1)}\) reduced by 28% to 255 MUSD since Suffield acquisition completion

\(\text{Million USD} \)

First Half 2018

Subsequent Q2 Events

- 60 MCAD second lien facility fully repaid and cancelled
- Final 15 MCAD repaid on August 3
- Lower cost of capital going forward
**Production Guidance**
- Q2 production at **34,900** boe/d, 6% higher than Q1 production and at the upper end of CMD guidance
- 30,000 to 34,000 boe/d full year guidance revised to **32,500 to 34,000** boe/d

**Operating Costs (1)**
- Q2 ahead of guidance at **12.0** USD/boe, year to date **12.2** USD/boe
- Full year guidance retained at **12.6** USD/boe

**Organic Growth**
- Capital programme increase to **44** MUSD (Q1 39.4 MUSD)
- Approved additional capital budget in Q2 for gas optimisation in Canada

**Operating Cash Flow**
- Strong cash flow generation
  - First Half OCF of **152.7** MUSD; 66% of full year guidance at 70 USD/bbl
  - Net debt(1) down from **355 to 255** MUSD

**Shareholder Value (2)**
- Post Suffield acquisition in Canada:
  - **89%** increase in 2P reserves value per share; 90% of 2P reserves value are producing
  - Currently **32%** discount to NAV per share

**Business Development**
- Opportunistic approach to further acquisitions

---

1) Non-IFRS measure, see MD&A
2) See MD&A and AIF, as at December 31, 2017, after giving effect to the Suffield acquisition (see also Press Release of February 26, 2018)
Forward Looking Statements

This presentation contains statements and information which constitute "forward-looking statements" or "forward-looking information" (within the meaning of applicable securities legislation). Such statements and information (together, "forward-looking statements") relate to future events, including the Corporation’s operating performance, business prospects or opportunities. Actual results may differ materially from those expressed or implied by forward-looking statements. The forward-looking statements contained in this presentation are expressly qualified by this cautionary statement. Forward-looking statements speak only as of the date of this presentation, unless otherwise indicated. IPC does not intend, and does not assume any obligation, to update these forward-looking statements, except as required by applicable laws.

All statements other than statements of historical fact may be forward-looking statements. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, forecasts, guidance, budgets, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "seek", "anticipate", "plan", "continue", "estimate", "expect", "may", "will", "project", "forecast", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe", "budget" and similar expressions) are not statements of historical fact and may be "forward-looking statements". Forward-looking statements include, but are not limited to, statements with respect to: our intention to continue to implement our strategies to build long-term shareholder value; IPC’s intention to review future potential growth opportunities; our belief that our resource base will provide feedback to add to reserves in the future; the ability of our high quality portfolio of assets to provide a solid foundation for organic and inorganic growth; organic growth opportunities in France, including the Villeperdue and the Vert-la-Gravelle projects and potential deeper prospectivity with the new 3D area acquired in 2017; results of previous infill drilling and the potential for future infill drilling in Malaysia; the drilling of the Kerung exploration prospect in Malaysia and the development options if drilling is successful; future development potential of the Suffield operations, including oil drilling and gas optimization, potential acquisition opportunities; estimates of reserves; estimates of contingent resources; estimates of prospective resources; the ability to generate free cash flows and use that cash to repay debt and to continue to deleverage; and future drilling and other exploration and development activities. Statements relating to "reserves", "contingent resources" and "prospective resources" are also deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves and resources described exist in the quantities predicted or estimated and that the reserves or resources are probable or potential.

The forward-looking statements are based on certain key expectations and assumptions made by IPC, including expectations and assumptions concerning: prevailing commodity prices and currency exchange rates; applicable royalty rates and tax laws; interest rates; future well production rates and reserve and contingent resource volumes; operating rates; the timing of receipt of regulatory approvals; the performance of existing wells; the success obtained in drilling new wells; anticipated timing and results of capital expenditures; the sufficiency of budgeted capital expenditures in carrying out planned activities; the timing, location and extent of future drilling operations; the successful completion of acquisitions and dispositions; the benefits of acquisitions; the state of the economy and the exploration and production business in the jurisdictions in which we operate; the availability of financing; the ability to comply with our organizational and contractual commitments and satisfy financial covenants; the ability to access the capital markets on acceptable terms and conditions; the ability to conduct exploration and exploitation activities; the outcome of legal proceedings and other disputes; the outcome of completion of joint venture arrangements; the ability to meet our obligations as they become due; the sufficiency of future capital resources for budgeted and expected capital expenditures; the sufficiency of the capital resources for the forecasted level of exploration and development activities; and the success of the various business, exploration and development activities of the Corporation.

Although IPC believes that the expectations and assumptions on which such forward-looking statements are based are reasonable, undue reliance should not be placed on such forward-looking statements because IPC can give no assurances that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks. These include, but are not limited to: the risks associated with the oil and gas industry in general such as operational risks in development, exploration and production; commodity price and exchange rate fluctuations; interest rate fluctuations; marketing and transportation; loss of markets; environmental risks; competition; incorrect assessment of the value of acquisitions; failure to complete or realize the anticipated benefits of acquisitions or dispositions; the ability to access sufficient capital from internal and external sources; failure to obtain required regulatory and other approvals; and changes in legislation, including but not limited to tax laws, royalties and environmental regulations. Readers are cautioned that the foregoing list of factors is not exhaustive.

Additional information on these other factors and risks that may affect IPC, or its operations or financial results, are included in the Corporation’s Annual Information Form (AIF) for the year ended December 31, 2017. See “Cautionary Statement Regarding Forward-Looking Information”, “Reserves and Resources Advisory” and “Risk Factors” and other reports on file with applicable securities regulatory authorities, including previous financial reports, management’s discussion and analysis and material change reports, which may be accessed through the SEDAR website (www.sedar.com) or IPC’s website (www.international-petroleum.com).

Non-IFRS Measures

References are made in this presentation to “operating cash flow” (OCF), “Earnings Before Interest, Tax, Depreciation and Amortization” (EBITDA), “operating costs” and “net debt”/“net cash”, which are not generally accepted accounting measures under International Financial Reporting Standards (IFRS) and do not have any standardized meaning prescribed by IFRS and, therefore, may not be comparable with definitions of OCF, EBITDA, operating costs and net debt/net cash that may be used by other public companies. Non-IFRS measures should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS.

Management believes that OCF, EBITDA, operating costs and net debt/net cash are useful supplemental measures of operating performance because they highlight trends in the core business and are not influenced by items such as the availability and cost of financing, capital expenditures, the ability to market crude oil, natural gas and natural gas liquids successfully. However, the Corporation does not, and does not assume any obligation, to update these non-IFRS measures as at the date of this presentation, unless otherwise indicated. Readers are advised that the information disclosed is intended to provide additional perspective and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS for the measurement of performance.

The definition and reconciliation of each non-IFRS measure is presented in IPC’s MD&A (See “Non-IFRS Measures” therein).

Disclosure of Oil and Gas Information

This presentation contains references to estimates of gross and net reserves and resources attributed to the Corporation’s oil and gas assets. Gross reserves / resources are the working interest (operating or non-operating) share after deduction of royalty interests and without including any royalty interest in the Corporation’s oil and gas assets. Net reserves / resources are the working interest (operating or non-operating) share after deduction of royalty obligations, plus royalty interests in resources/reserves, and in reserves of PSRs in Malaysia, adjusted for cost of production. IPC has, on occasion or as a substitute for measures prepared in accordance with IFRS.

Reserves estimates, contingent resource estimates, prospective resource estimates and estimates of future net revenue in respect of IPC’s oil and gas assets in France, Malaysia and the Netherlands are effective as of December 31, 2017 and were prepared by IPC and audited by ERC Equeipoise Ltd. (ERC). An independent qualified reserves auditor, in accordance with National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities (NI 51-101) and the Canadian Oil and Gas Evaluation Handbook (the COGE Handbook), and using McDaniel's January 1, 2018 price forecasts as referenced below:

Reserves estimates, contingent resource estimates and estimates of future net revenue in respect of IPC’s oil and gas assets in Canada are effective as of January 5, 2018, being the completion date for the acquisition of these assets by IPC, and were evaluated by McDaniel & Associates Consultants Ltd. (McDaniel), an independent qualified reserves evaluator, in accordance with NI 51-101 and the COGE Handbook, and using McDaniel’s January 1, 2018 price forecasts. The volumes are reported and aggregated by IPC in this presentation as being as at December 31, 2017.

The price forecasts used in the reserve audit / evaluation are available on the website of McDaniel (www.mcdan.com), and are contained in the AIF.
The assumptions underlying the net asset value per share are further described in the Corporation’s press release dated February 26, 2018, available on the SEDAR website (www.sedar.com) or IPC’s website (www.international-petroleum.com).

Light and medium crude oil reserves/resources disclosed in this presentation include solution gas and other by-products. 2P reserves” means IPC’s gross proved plus probable reserves. “Proved reserves” are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves. “Probable reserves” are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Contingent resources are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. Contingencies are conditions that must be satisfied for a portion of contingent resources to be classified as reserves that are: (a) specific to the project being evaluated; and (b) expected to be resolved within a reasonable timeframe. Contingencies may include factors such as economic, legal, environmental, political, and regulatory matters, or a lack of markets. It is also appropriate to classify as contingent resources the estimated discovered recoverable quantities associated with a project in the early evaluation stage. Contingent resources are further classified in accordance with the level of certainty associated with the estimates and may be sub-classified based on a project maturity and/or characterized by their economic status.

There are three classifications of contingent resources: low estimate, best estimate and high estimate. Best estimate is a classification of estimated resources described in the CGGE Handbook as being considered to be the best estimate of the quantity that will be actually recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate. If probabilistic methods are used, there should be at least a 50% probability that the quantities actually recovered will equal or exceed the best estimate.

Contingent resources are further classified based on project maturity. The project maturity subclasses include development pending, development on hold, development unclarified and development not viable. All of the Corporation’s contingent resources are classified as development unclarified. Development unclarified is defined as a contingent resource that requires further appraisal to clarify the potential for development and has been assigned a lower chance of development until contingencies can be clearly defined. Chance of development is the probability of a project being commercially viable. Of the Corporation’s 63.4 MMboe best estimate contingent resources (unrisked), 17.4 MMboe are light and medium crude oil, 7.4 MMboe are heavy crude oil and 38.6 MMboe are conventional natural gas.

References to “unrisked” contingent resources volumes means that the reported volumes of contingent resources have not been risked (or adjusted) based on the chance of commerciality of such resources. In accordance with the COGE Handbook for contingent resources, the chance of commerciality is solely based on the chance of development based on all contingencies required for the re-classification of the contingent resources as reserves being resolved. Therefore unrisked reported volumes of contingent resources do not reflect the risking (or adjustment) of such volumes based on the chance of development of such resources.

The contingent resources reported in this presentation are estimates only. The estimates are based upon a number of factors and assumptions each of which contains estimation error which could result in future revisions of the estimates as more technical and commercial information becomes available. The estimation factors include, but are not limited to, the mapped extent of the oil and gas accumulations, geologic characteristics of the reservoirs, and dynamic reservoir performance. There are numerous risks and uncertainties associated with recovery of such resources, including many factors beyond the Corporation’s control. There is uncertainty that it will be commercially viable to produce any portion of the contingent resources referred to in this presentation.

Prospective resources are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from undiscovered accumulations by application of future development projects. Prospective resources have both an associated chance of discovery and a chance of development. Chance of discovery is the estimated probability that exploration activities will confirm the existence of a significant accumulation of potentially recoverable petroleum. There is no certainty that any portion of the prospective resources estimated in the report audited by ERM and summarized in this document will be discovered. If discovered, there is no certainty that it will be commercially viable to produce any portion of the prospective resources audited. Estimates of the prospective resources should be regarded only as estimates that may change as additional information becomes available. But such estimates are also subject to uncertainties inherent in the application of judgmental factors in interpreting such information. Prospective resources should not be confused with those quantities that are associated with contingent resources or reserves due to the additional risks involved. Because of the uncertainty of commerciality and the lack of sufficient exploration drilling, the prospective resources estimated in the report audited by ERM and summarized in this document cannot be classified as contingent resources or reserves. The quantities that might actually be recovered, should they be discovered and developed, may differ significantly from the estimates in the report. ERM and summarized in this document.

2P reserves and contingent resources audited by ERM and evaluated by McDaniel have been aggregated in this presentation by IPC. Estimates of reserves, resources and future net revenue for individual properties may not reflect the same level of confidence as estimates of reserves, resources and future net revenue for all properties, due to aggregation. This presentation contains estimates of the net present value of the future net revenue from IPC’s reserves. The estimated values of future net revenue disclosed in this presentation do not represent fair market value. There is no assurance that the forecast prices and cost assumptions used in the reserve evaluations will be attained and variances could be material.

References to “contingent resources” do not constitute, and should be distinguished from, references to “reserves”. References to “prospective resources” do not constitute, and should be distinguished from, references to “contingent resources” and “reserves”.

This presentation includes oil and gas metrics including “cash margin netback”, “operating cash flow netback”, “cash taxes”, “EBITDA netback” and “profit netback”. Such metrics do not have a standardized meaning under IFRS or otherwise, and as such may not be reliable. This information should not be used to make comparisons.

“Cash margin netback” is calculated on a per boe basis as oil and gas sales, less operating, tariff/transportation and production tax expenses. Netback is a common metric used in the oil and gas industry and is used by management to measure operating results on a per boe basis to better analyze performance against prior periods on a comparable basis.

“Operating cash flow netback” is calculated as cash margin netback less cash taxes. Operating cash flow netback is used to measure operating results on a per boe basis of cash flow.

“Cash taxes” is calculated as taxes payable in cash, and not only for accounting purposes. Cash taxes is used to measure cash flow.

“EBITDA netback” is calculated as cash margin netback less general and administration expenses. EBITDA netback is used by management to measure operating results on a per boe basis.

“Profit netback” is calculated as cash margin netback less depletion/depreciation, general and administration expenses and financial items. Profit netback is used by management to measure operating results on a per boe basis.

BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 thousand cubic feet (Mcf) per 1 barrel (bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a 6:1 conversion basis may be misleading as an indication of value.
