

2020 Highlights

Production (1)

- Q4 average net production of 44,900 boepd

- Full year average production at 42,100 boepd; in line with Q3 guidance

Operating Costs (2)

- Full year and Q4 average operating costs of 12 USD/boe; in line with Q3 guidance

Organic Growth (3)

- 2020 capital expenditure of 82 MUSD; marginally above revised guidance

- ~50 % reduction on original 2020 CMD guidance

Cash Flows (2)

- 2020 operating cash flow (OCF) generation of 119 MUSD; 2020 free cash flow (FCF) of 9 MUSD

- Q4 OCF of 46 MUSD and FCF of 29 MUSD

Liquidity (2)

- Net debt at December 31, 2020 of 321 MUSD

- Significant liquidity headroom under existing bank facilities

Reserves & Resources (4)

- 272 MMboe 2P reserves / 18 years of reserves life

- 1,102 MMboe 2C resources

ESG

- No material incidents

- First Sustainability Report issued; Emission reduction strategy

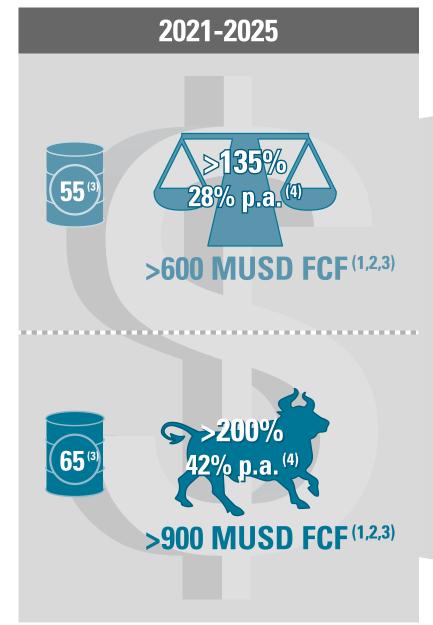

¹⁾ See Reader Advisory, including Supplemental Information regarding Product Types.

²⁾ Non-IFRS measure, see Reader Advisory and MD&A. ³⁾ Capital expenditure includes decommissioning expenditure.

⁴⁾ As at December 31, 2020, see Reader Advisory, Material Change Report (MCR) and press release of February 9, 2021.

Strongly Positioned to Create Shareholder Value (1)

Organic Growth
>1 Billion boe of contingent resources (1)

¹⁾ See Reader Advisory, MCR and press release of February 9, 2021. Estimates are based on IPC's 2021 CMD business plans. 2) Non-IFRS measure, see Reader Advisory and MD&A.

³⁾ Average Brent oil price assumption, escalating +2% p.a., Brent to Western Canadian Select (WCS) differentials as per IPC's independent reserves evaluator. Average gas price assumption of 2.5 CAD/mcf.

⁴⁾ FCF yield based on IPC market capitalisation at close February 5, 2021; (23.36 SEK/share, 8.4 SEK/USD, 433 MUSD)

2P Reserves Growth

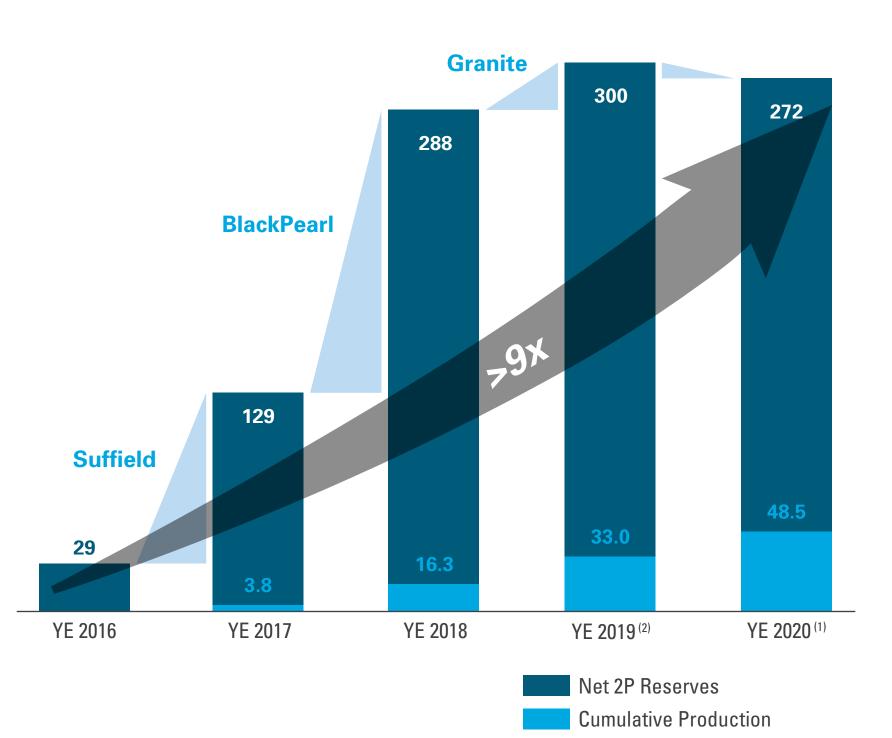

- Significant 2P reserves growth since 2017
- 2P reserves of 272 MMboe⁽¹⁾
- Reserves life index (RLI) of 18 years (1)

Reserves Life Index (years)

YE 2016 8

YE 2020 (1)

Net 2P Reserves (MMboe)

¹⁾ As at December 31, 2020. See Reader Advisory, MCR and press release of February 9, 2021.

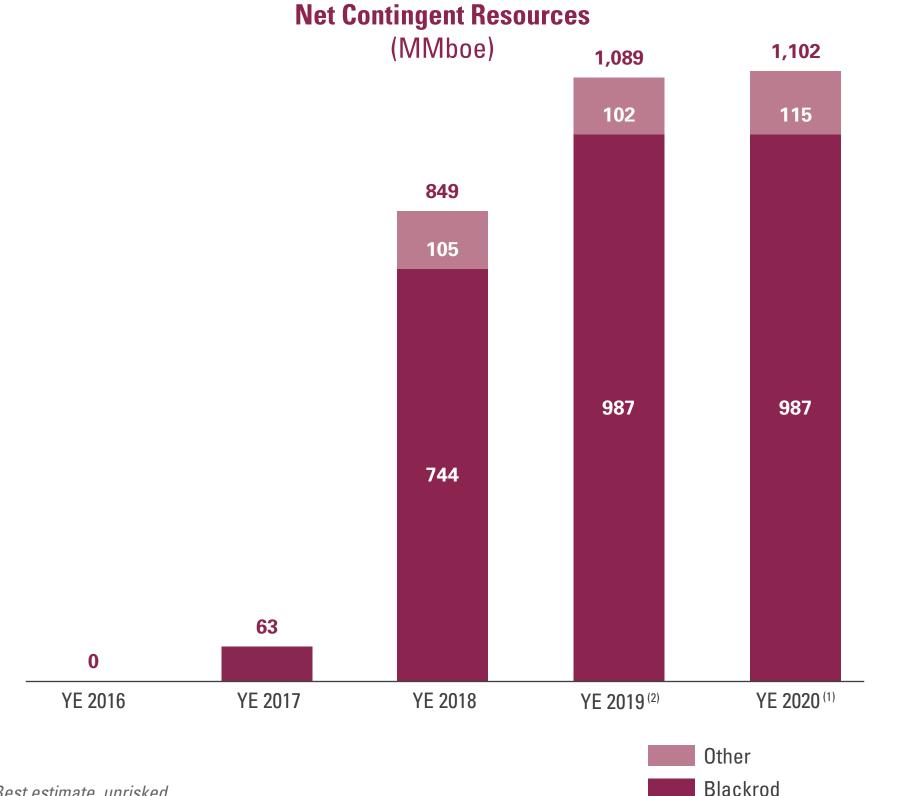

²⁾ Includes 2P reserves attributable to the Granite acquisition. See material change report of February 11, 2020.

Contingent Resources (1)

Contingent resource base >1 billion boe (1)

Potential to mature resources in all countries

- Canada Blackrod pilot ongoing
 - Ferguson field development
- Malaysia Further infill drilling
- France Build on horizontal drilling success
 - 5 MMboe post 2040 reserves reclassified to contingent resources

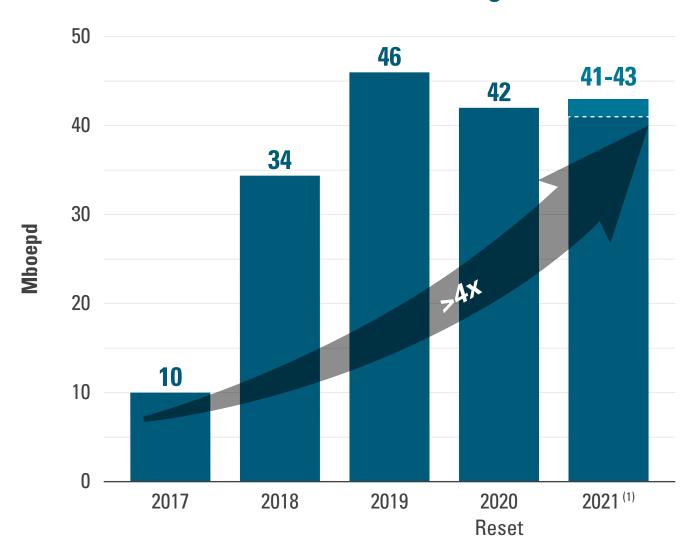

¹⁾ As at December 31, 2020. See Reader Advisory, MCR and press release of February 9, 2021. Best estimate, unrisked.

²⁾ Includes contingent resources attributable to the Granite acquisition. See material change report of February 11, 2020.

2021 Production Guidance

- **2021** production guidance of 41,000 43,000 boepd (1)
- Exit rate potential above high end guidance
 - Additional 25% interest in Bertam (April 2021)
 - Pad D' contribution at Onion Lake Thermal (end 2021)

Production Growth Through Time

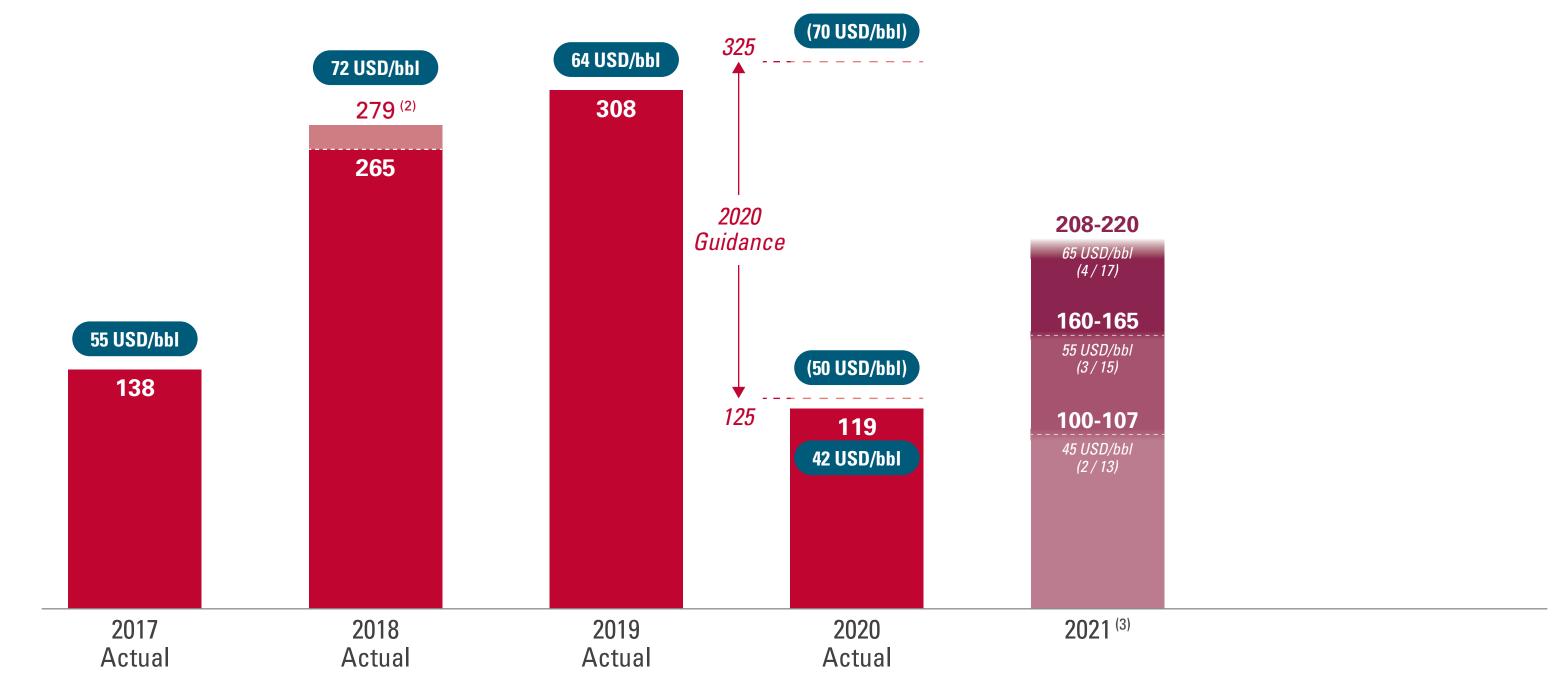

¹⁾ See Reader Advisory, including Supplementary Information regarding Product Types.

Operating Cash Flow (MUSD) (1)

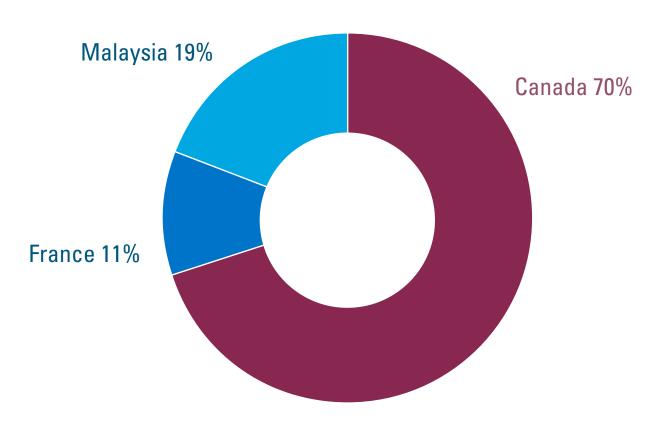

¹⁾ Non-IFRS measure, see Reader Advisory and MD&A. ²⁾ Including OCF related to Netherlands assets disposed in December 2018.

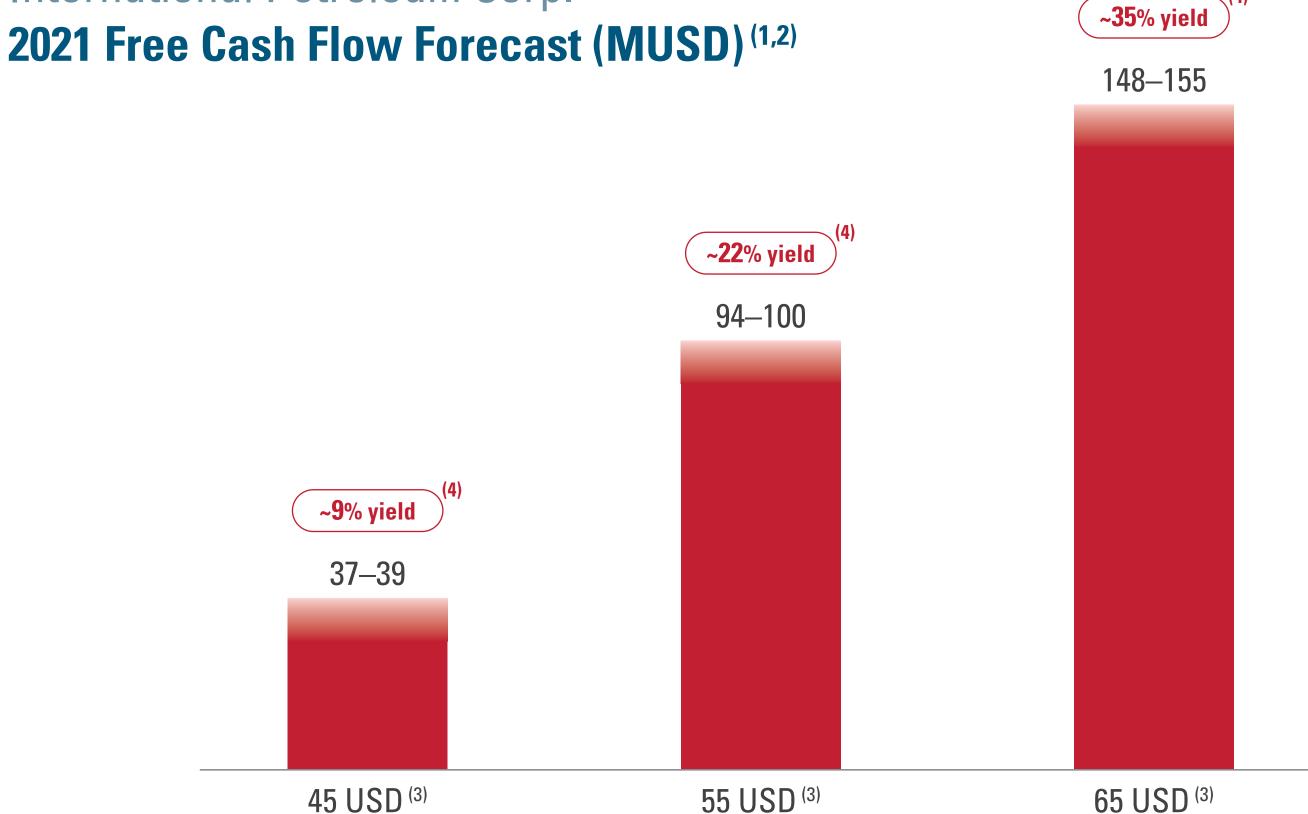

³⁾ At mid-point of 2021 production guidance. Brent oil price assumption, with Brent to WTI differential and WTI to WCS differential in brackets, in USD.

2021 CMD Investment Strategy (1)

- Minimise capital expenditure, maximise free cash flow
- Forecast capital expenditure of 37 MUSD (2), down 55% from 2020
- Investment Strategy
 - Growth capital spend on Onion Lake Thermal (OLT)
 - Preserve OLT infill drilling flexibility
 - Preserve drilling flexibility in Malaysia
- 2021 expenditure programme fully funded at <40 USD/bbl Brent, Brent/WTI differential of 2 USD/bbl and WTI/WCS differential of 13 USD/bbl

¹⁾ See Reader Advisory, MCR and press release of February 9, 2021. Estimates are based on IPC's 2021 CMD business plans. ²⁾ Non-IFRS measure, see Reader Advisory and MD&A.

³⁾ Average Brent oil price assumption, escalating +2% p.a., Brent to Western Canadian Select (WCS) differentials as per IPC's independent reserves evaluator. Average gas price assumption of 2.5 CAD/mcf.

⁴⁾ FCF yield based on IPC market capitalisation at close February 5, 2021; (23.36 SEK/share, 8.4 SEK/USD, 433 MUSD)

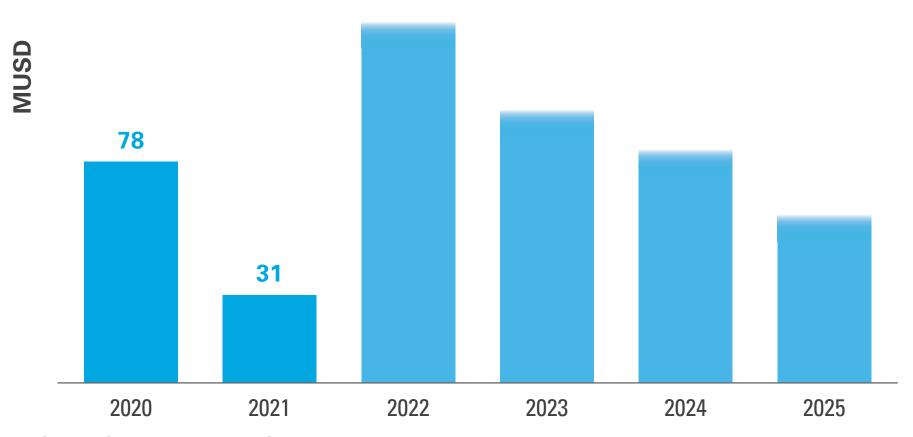

Forecast 2P Reserves Capital Expenditure (1)

- Reset of long-term plan reduces forecast capital expenditure by 100 MUSD over 5 years
- Focus on free cash flow resilience at lower oil prices
- Significant discretion on forward plan

2020 5 Year Business Plan = 450 MUSD ~5 USD/boe

2021 5 Year Business Plan = 350 MUSD ~4.50 USD/boe

~4.50 USD/boe

¹⁾ See Reader Advisory, MCR and press release of February 9, 2021. Estimates are based on IPC's 2021 CMD business plans. Capital expenditure excludes decommissioning expenditure.

Canadian Supply and Egress Update

Enbridge Line 3 Replacement

370,000 bopd Q4 2021

- Canadian section complete
- Remaining US construction requires 6-9 months

Trans Mountain Expansion

590,000 bopd end 2022

 Construction commenced, to be underway on all sections by year end and completed end 2022

Keystone XL

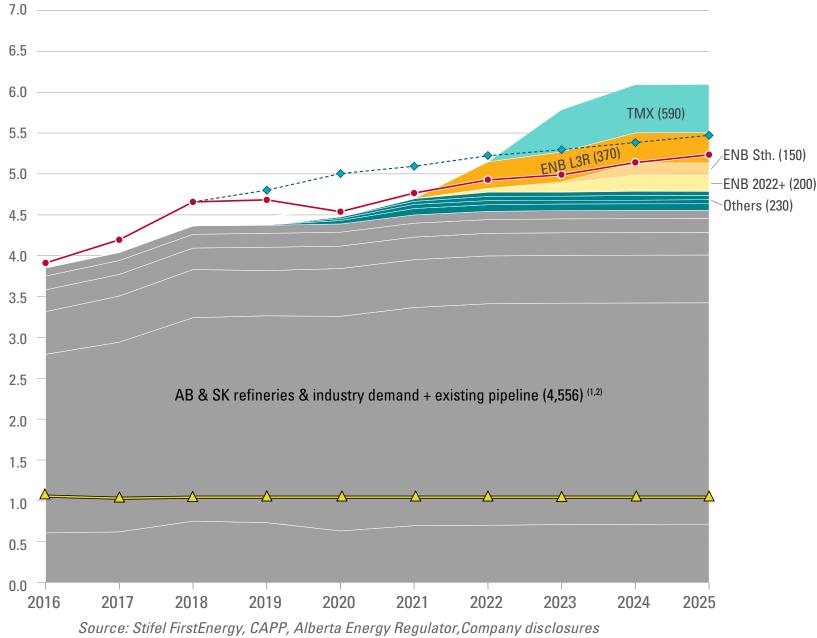

830,000 bopd

- Biden executive order to block project
- Assumed does not proceed

Forward Looking Statements

This presentation contains statements and information which constitute "forward-looking statements" or "forward-looking information" (within the meaning of applicable securities legislation). Such statements and information (together, "forward-looking statements") relate to future events, including the Corporation's future performance, business prospects or opportunities. Actual results may differ materially from those expressed or implied by forward-looking statements. The forward-looking statements contained in this presentation are expressly qualified by this cautionary statement. Forward-looking statements speak only as of the date of this presentation, unless otherwise indicated. IPC does not intend, and does not intend in this presentation.

The Covid-19 virus and the restrictions and disruptions related to it have had a drastic adverse effect on the world demand for, and prices of, oil and gas as well as the market price of the shares of oil and gas companies generally, including the Corporation's common shares. There can be no assurance that these adverse effects will not continue or that commodity prices will not decrease or remain volatile in the future. These factors are beyond the corporation and it is difficult to assess how these, and other factors, will continue to affect the Corporation and the market price of IPC's common shares. In light of the current situation, as at the date of this presentation, the Corporation continues to review and assess its business plans and assumptions regarding the business environment, as well as its estimates of future production, cash flows, operating costs and capital expenditures.

All statements other than statements of historical fact may be forward-looking statements. Any statements or involve discussions with respect to predictions, beliefs, plans, projections, forecasts, guidance, budgets, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "seek", "anticipate", "potential", "targeting", "intend", "could", "might", "should", "believe", "budget" and similar expressions) are not statements of historical fact and may be "forward-looking statements". Forward-looking statements with respect to:

- IPC's ability to maximize liquidity and financial flexibility in connection with the current and any future Covid-19 outbreaks and reductions in commodity prices;
- the expectation that recent actions will assist in reducing inventory builds and in rebalancing markets, including supply and demand for oil and gas;
- the potential for an improved future economic environment, including resulting from a lack of capital investment and drilling in the oil and gas industry;
- 2021 production range, operating costs and capital and decommissioning expenditure estimates;
- estimates of future production, cash flows, operating costs and capital expenditures that are based on IPC's current business plans and assumptions regarding the business environment, which are subject to change;
- IPC's financial and operational flexibility to continue to react to recent events and navigate the Corporation through periods of low commodity prices;
- IPC's ability, as market conditions evolve and if determined necessary from time to time, to reduce expenditures and curtail production, and then to resume such production;
- IPC's continued access to its existing credit facilities, including current financial headroom, on terms acceptable to the Corporation;
- the ability to fully fund 2021 expenditures from cash flows and current borrowing capacity;
- IPC's flexibility to remain within existing financial headroom;
- IPC's ability to maintain operations, production and business in light of the current and any future Covid-19 outbreaks and the restrictions and disruptions related thereto, including risks related to production delays and interruptions, changes in laws and regulations and reliance on third-party operators and infrastructure;
- IPC's intention and ability to continue to implement our strategies to build long-term shareholder value;
- the ability of IPC's portfolio of assets to provide a solid foundation for organic and inorganic growth;
- the continued facility uptime and reservoir performance in IPC's areas of operation;
- future development potential of the Suffield and Ferguson operations, including future oil drilling and gas optimization programs:
- development of the Blackrod project in Canada;
- current and future drilling pad production and timing and success of facility upgrades and tie-in work at Onion Lake Thermal;
- the ability to maintain current and forecast production in France;
- the ability of IPC to identify and implement alternative transportation and marketing options for Paris Basin production in connection with the announced closure of the Total-operated Grandpuits refinery, on terms acceptable to the Corporation;
- the ability of IPC to achieve and maintain current and forecast production in Malaysia;
- the withdrawal of PCSB from the Block PM307 and the ability of IPC to increase its WI in such Block to 100%;
- the existence of future M&A opportunities and the ability of IPC to participate in such opportunities;
- IPC's ability to implement its GHG emissions intensity and climate strategies and to achieve its net GHG emissions intensity reduction targets;
- estimates of reserves;
- estimates of contingent resources;
- the ability to generate free cash flows and use that cash to repay debt; and
- future drilling and other exploration and development activities.

Statements relating to "reserves" and "contingent resources" are also deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves and resources described exist in the quantities predicted or estimated and that the reserves and resources can be profitably produced in the future. Ultimate recovery of reserves or resources is based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management.

The forward-looking statements are based on certain key expectations and assumptions made by IPC, including expectations and assumptions concerning: prevailing commodity prices and currency exchange rates; applicable royalty rates and tax laws; interest rates; future well production rates and reserve and contingent resource volumes; operating costs; the timing of receipt of regulatory approvals; the success obtained in drilling new wells; anticipated timing and results of capital expenditures; the sufficiency of budgeted capital expenditures in carrying out planned activities; the timing, location and extent of future drilling operations; the benefits of acquisitions; the state of the economy and the exploration and production business in the jurisdictions in which IPC operates and globally; the availability and cost of financing, labour and services; and the ability to market crude oil, natural gas liquids successfully.

Although IPC believes that the expectations and assumptions on which such forward-looking statements are based are reasonable, undue reliance should not be placed on the forward-looking statements because IPC can give no assurances that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks. These include, but are not limited to:

- the risks associated with the oil and gas industry in general such as operational risks in development, exploration and production;
- delays or changes in plans with respect to exploration or development projects or capital expenditures;
- the uncertainty of estimates and projections relating to reserves, resources, production, revenues, costs and expenses;
- health, safety and environmental risks;
- commodity price fluctuations;
- interest rate and exchange rate fluctuations:
- marketing and transportation;
- loss of markets:
- environmental risks;
- competition;
- incorrect assessment of the value of acquisitions;
- failure to complete or realize the anticipated benefits of acquisitions or dispositions:
- the ability to access sufficient capital from internal and external sources;
- failure to obtain required regulatory and other approvals; and
- changes in legislation, including but not limited to tax laws, royalties, environmental and abandonment regulations.

Readers are cautioned that the foregoing list of factors is not exhaustive.

Additional information on these and other factors that could affect IPC, or its operations or financial results, are included in the material change report dated February 9, 2021 (MCR), the financial statements and the management's discussion and analysis for the year ended December 31, 2020 (MD&A) (See "Cautionary Statement Regarding Forward-Looking Information", "Reserves and Resources Advisory" and "Risk Factors" therein) and other reports on file with applicable securities regulatory authorities, including previous financial reports, management's discussion and analysis and material change reports, which may be accessed through the SEDAR website (www.sedar.com) or IPC's website (www.international-petroleum.com).

The current and any future Covid-19 outbreaks may increase IPC's exposure to, and magnitude of, each of the risks and uncertainties identified above that result from a reduction in demand for oil and gas consumption and/or lower commodity prices and/or reliance on third parties. The extent to which Covid-19 impacts IPC's business, results of operations and financial condition will depend on future developments, which are highly uncertain and are difficult to predict, including, but not limited to, the duration and spread of the current and any future Covid-19 outbreaks, their severity, the actions taken to contain such outbreaks or treat their impact, and how quickly and to what extent normal economic and operating conditions resume and their impacts to IPC's business, results of operations and financial condition which could be more significant in upcoming periods as compared with previous periods. Even after the Covid-19 outbreaks have subsided, IPC may continue to experience materially adverse impacts to IPC's business as a result of the global economic impact.

Non-IFRS Measure

References are made in this presentation to "operating cash flow" (OCF), "free cash flow" (PCF), "Earnings Before Interest, Tax, Depreciation and Amortization" (EBITDA), "operating costs" and "net debt", which are not generally accepted accounting measures under International Financial Reporting Standards (IFRS) and do not have any standardized meaning prescribed by IFRS and, therefore, may not be comparable with similar measures prepared in accordance with IFRS.

The Corporation uses non-IFRS measures to provide investors with supplemental measures to assess the cash generated by and the financial performance and position of the Corporation. Management also uses non-IFRS measures internally in order to facilitate operating performance comparisons from period to period, prepare annual operating budgets and assess the Corporation's ability to meet its future capital expenditure and working capital requirements. Management believes these non-IFRS measures are important supplemental measures of operating performance because they highlight trends in the core business that may not otherwise be apparent when relying solely on IFRS financial measures. Management believes such measures allow for assessment of the Corporation's operating performance and financial condition on a basis that is more consistent and comparable between reporting periods. The Corporation also believes that securities analysts, investors and other interested parties frequently use non-IFRS measures in the evaluation of issuers. Forward-looking statements are provided for the purpose of presenting information about management's current expectations and plans relating to the future and readers are cautioned that such statements may not be appropriate for other purposes.

The definition and reconciliation of each non-IFRS measure is presented in IPC's MD&A (See "Non-IFRS Measures" therein).

Estimated free cash flow generation is based on IPC's current business plans over the period of 2021 to 2025. Assumptions include average net production of approximately 45 Mboepd, average Brent oil prices of USD 55 to 65 per boe escalating by 2% per year, average gas prices of CAD 2.50 per thousand cubic feet, and average Brent to Western Canadian Select differentials as estimated by IPC's independent reserves evaluator and as further described in the MCR. IPC's current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

Disclosure of Oil and Gas Information

This presentation contains references to estimates of gross and net reserves and resources attributed to the Corporation's oil and gas assets. Gross reserves / resources are the working interest (operating) share before deduction of royalties and without including any royalty interests. Net reserves / resources are the working interest (operating or non-operating) share after deduction of royalty obligations, plus royalty interests in reserves/resources, and in respect of PSCs in Malaysia, adjusted for cost and profit oil. Unless otherwise indicated, reserves / resource volumes are presented on a gross basis.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in Canada are effective as of December 31, 2020, and are included in the reports prepared by Sproule Associates Limited (Sproule), an independent qualified reserves evaluator, in accordance with National Instrument 51-101 — Standards of Disclosure for Oil and Gas Evaluation Handbook (the COGE Handbook) and using Sproule's December 31, 2020 price forecasts.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in France and Malaysia are effective as of December 31, 2020, and are included in the report prepared by ERC Equipoise Ltd. (ERCE), an independent qualified reserves auditor, in accordance with NI 51-101 and the COGE Handbook, and using Sproule's December 31, 2020 price forecasts.

The price forecasts used in the Sproule and ERCE reports are available on the website of Sproule (sproule.com) and are contained in the MCR.

The reserves life index (RLI) is calculated by dividing the 2P reserves of 272 MMboe as at December 31, 2020, by the mid-point of the 2021 production guidance of 41,000 to 43,000 boepd.

The product types comprising the 2P reserves and contingent resources described in this presentation are contained in the MCR. See also "Supplemental Information regarding Product Types" below. Light, medium and heavy crude oil reserves/resources disclosed in this presentation include solution gas and other by-products.

"2P reserves" means proved plus probable reserves. "Proved reserves" are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves. "Probable reserves" are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Each of the reserves categories reported (proved and probable) may be divided into developed and undeveloped reserves" are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and non-producing and non-producing reserves" are those reserves may be currently producing or, if shut-in, they must have previously been on production must be known with reasonable certainty. "Developed non-producing reserves" are those reserves that either have not been on production, but are shut-in, and the date of resumption of production is unknown. "Undeveloped reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable) to which they are assigned.

Contingent resources are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations using established technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. Contingencies are conditions that must be satisfied for a portion of contingencies may include factors such as economic, legal, environmental, political, and regulatory matters, or a lack of markets. It is also appropriate to classified as contingent resources the estimated discovered recoverable quantities associated with a project in the early evaluation stage. Contingent resources are further classified in accordance with the level of certainty associated with the estimates and may be sub-classified based on a project maturity and/or characterized by their economic status.

There are three classifications of contingent resources: low estimate, best estimate and high estimate. Best estimate is a classification of estimated resources described in the COGE Handbook as being considered to be the best estimate of the quantity that will be actually recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate.

Contingent resources are further classified based on project maturity. The project maturity subclasses include development on hold, development unclarified and development not viable. All of the Corporation's contingent resources are classified as either development on hold or development unclarified. Development unclarified. Development unclarified is defined as a contingent resource where there is a reasonable chance of development unclarified is defined as a contingent resource that requires further appraisal to clarify the potential for development until contingencies can be clearly defined. Chance of development is the probability of a project being commercially viable.

References to "unrisked" contingent resources volumes means that the reported volumes of contingent resources have not been risked (or adjusted) based on the chance of commerciality of such resources. In accordance with the COGE Handbook for contingent resources, the chance of commerciality is solely based on the chance of development based on all contingencies required for the re-classification of the contingent resources as reserves being resolved. Therefore unrisked reported volumes of contingent resources do not reflect the risking (or adjustment) of such volumes based on the chance of development of such resources.

The contingent resources reported in this presentation are estimates are based upon a number of factors and assumptions each of which contains estimation error which could result in future revisions of the estimates as more technical and commercial information becomes available. The estimation factors include, but are not limited to, the mapped extent of the oil and gas accumulations, geologic characteristics of the reservoirs, and dynamic reservoir performance. There are numerous risks and uncertainties associated with recovery of such resources, including many factors beyond the Corporation's control. There is uncertainty that it will be commercially viable to produce any portion of the contingent resources referred to in this presentation. References to "contingent resources" do not constitute, and should be distinguished from, references to "reserves".

2P reserves and contingent resources included in the reports prepared by Sproule and ERCE in respect of IPC's oil and gas assets in Canada, France and Malaysia have been aggregated by IPC. Estimates of reserves, resources and future net revenue for individual properties may not reflect the same level of confidence as estimates of reserves, resources and future net revenue for all properties, due to aggregation. This presentation contains estimates of the net present value of the future net revenue from IPC's reserves. The estimated values of future net revenue disclosed in this presentation do not represent fair market value. There is no assurance that the forecast prices and cost assumptions will be attained and variances could be material.

The reserves and resources information and data provided in this presentation presents only a portion of the disclosure required under NI 51-101. All of the required information will be contained in the Corporation's Annual Information Form for the year ended December 31, 2020, which will be filed on SEDAR (accessible at www.sedar.com) on or before April 1, 2021. Further information with respect to IPC's 2P reserves, contingent resources and estimates of future net revenue, including assumptions relating to the calculation of net present value and other relevant information related to the contingent resources disclosed, is disclosed in the MCR available under IPC's website at www.international-petroleum.com.

BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 thousand cubic feet (Mcf) per 1 barrel (bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a 6:1 conversion basis may be misleading as an indication of value.

Supplemental Information regarding Product Types

The following table is intended to provide supplemental information about the product type composition of IPC's net average daily production figures provided in this document:

	Heavy Crude Oil (Mboepd)	Light and Medium Crude Oil (Mboepd)	Conventional Natural Gas (per day)	Total (Mboepd)
Three months ended				
September 30, 2019	19.4	7.6	110.1 Mcf (18.4 Mboe)	45.4
December 31, 2019	20.5	8.6	108.8 Mcf (18.1 Mboe)	47.2
September 30, 2020	15.8	8.7	103.5 Mcf (17.3 Mboe)	41.8
December 31, 2020	19.2	8.2	104.7 Mcf (17.4 Mboe)	44.9
Year ended				
September 30, 2019	19.5	8.3	107.9 Mcf (18.0 Mboe)	45.8
December 31, 2019	16.5	8.5	103.1 Mcf (17.2 Mboe)	42.1

This presentation also makes reference to IPC's forecast total average daily production of 41,000 to 43,000 boepd for 2021. IPC estimates that approximately 44% of that production will be comprised of heavy oil, approximately 18% will be comprised of light and medium crude oil and approximately 38% will be comprised of conventional natural gas.

This presentation includes oil and gas metrics including "cash margin netback", "taxation netback", "cash taxes", "EBITDA netback". Such metrics do not have a standardized meaning under IFRS or otherwise, and as such may not be reliable. This information should not be used to make comparisons.

"Cash margin netback" is calculated on a per boe basis as oil and gas sales, less operating, tariff/transportation and production tax expenses. Netback is a common metric used in the oil and gas industry and is used by management to measure operating results on a per boe basis to better analyze performance against prior periods on a comparable basis.

"Taxation netback" is calculated on a per boe basis as current tax charge/credit less deferred tax charge/credit. Taxation netback is used to measure taxation on a per boe basis.

"Operating cash flow netback" is calculated as cash margin netback less cash taxes. Operating cash flow netback is used to measure operating results on a per boe basis of cash flow.

"Cash taxes" is calculated as taxes payable in cash, and not only for accounting purposes. Cash taxes is used to measure cash flow.

"EBITDA netback" is calculated as cash margin netback less general and administration expenses. EBITDA netback is used by management to measure operating results on a per boe basis.

"Profit netback" is calculated as cash margin netback less depletion/depreciation, general and administration expenses and financial items. Profit netback is used by management to measure operating results on a per boe basis.

Currency

All dollar amounts in this presentation are expressed in United States dollars, except where otherwise noted. References herein to USD mean United States dollars. References herein to CAD mean Canadian dollars.
